Modern Campus 7/14/2023
Meeting Notes:

- Yosemite's goal with this redesign is to streamline the management process and have the sites function similar. The biggest difference between the site templates are the CSS files for each site.
- Questions Emily is looking into:
  - Does the Faculty Directory search all content on the profile pages or just the keywords?
    - Answer: The search bar on the Faculty Directory listing page is more of a filter. It will only search through the information displayed in the listing, such as name, department, title, etc. If you want to add the ability to search for additional information such as languages spoken by staff/faculty, the design will need to be updated to account for this information. Please let me know if you have any additional questions.
  - Does the Modern Campus cloud service use any 3rd party services like GitHub to manage/update code?
    - Answer: All code will be managed directly through Omni CMS. You can log into Omni CMS and update the source code directly.
- Pending items needed from Yosemite:
  - XML data for the facility directory profiles.
  - Embed code for the Search and Search results for each site.
  - Defaults Images for Profile Pages and News Listing that do not have images uploaded.
  - List for the dropdown menu on the Faculty Directory listing (Office or Department).
  - Lists for the dropdown menus on the All Degrees & Certificates page (School, Subject, and Degree/Certificate Type).
